- This tile displays a count of your LIVE Farmobile PUC devices by activity. This tile updates every 5 minutes.
 - You can navigate to the machines view by clicking on the LIVE machine counter.

Step 3 — Machine Utilization Tiles

- These tiles allow users to show activity based on a selected date range and activity. If no data is displayed, change the start date so that more data is processed within the tiles
 - Note: if you have access to multiple growers, you might need to change the date range before a grower dropdown will appear.
 Once the grower dropdown appears, you can navigate between multiple growers

Step 4 — Certification and EFR Acre Counts

- These tiles are controlled by selecting a year in the dropdown
- The certification progress tile displays the number of certified EFRs that you have. When a grower is selected, the certification progress counts link to an EFR view that only shows you your uncertified EFRs. This view gives you quick insights into what needs certified.
- The EFR acre count tile displays a count of worked acres that occurred within your field boundaries. This view gives you quick insights into how many acres of each activity you have performed
